

How to make a flytrap puppet

Materials needed:

- White paper plate
- Green, red and black crayons or markers
- Scissors

Step one:

- Color one side of the plate green.
- Flip the plate over and color the other side red.

Step two:

- Fold the plate in half

Step three:

- With adult supervision, cut small triangles out around the edge of the plate. These will be the 'teeth' of your flytrap!
Fold all of the triangles inward.

Step four:

- Color some of the spare triangles black and pretend they are insects for your flytrap puppet– see if you can catch them in the trap!
